A = REF
537 rated

B = SVC inst.
200 rated

A: 300 random + 237 one-capability variants of the 30 best

B: 200 random

5 leaders of each for proposals

2 Blind judge and generator

brief + configs (batches of 100)

Claude

Opus 5.5
Haiku 5.5

ratings 0–100

8 variants per leader

blind: no access to the model, the code or any utility; 16 sessions; inputs and outputs released

true utility U from the testbed is used only to score the outputs

3 Ledger runs

ledger on A with a screen of the measured validity near the leaders

vs no screen and $\rho = 0.5$; $V \in \{5, 20\}$

100 runs each, **800 runs**

4 Measured

validity ρ: all, random, near leaders

top-decile precision

overload in top quartile

share of proposals improving

toggles on 4 favourite capabilities

5 Analysis

Bootstrap 95 % CI (2,000 resamples)

proposals vs random 1–2 capability variants

ledger: paired difference vs no screen
