1 Landscapes & runs

REF, 1 inst.
150 runs

SVC, 30 inst.
5 runs each

RUG, 20 inst.
5 runs each

per cell of 3 sizes × 6 allocations

2 Traffic split & allocation

800,000 sessions per run, cut into tests of three sizes:

1,600 tests of 500

400 tests of 2,000

100 tests of 8,000

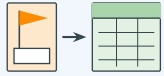

each bar: $\frac{1}{100}$ of the run's traffic

new configurations per round of 5 tests:

shown: $k_{\text{new}} = 3$
levels: $\frac{1}{2}$, 1, 2, 3, 4, 5
($\frac{1}{2}$: one every second round)

3 Programme

design-thinking loop without rotating re-test

re-tests go to the leaders

ship when the traffic is spent

4 Measured

shipped $U(\hat{x})/U^*$ after 800,000 sessions

5 Analysis

Best allocation per class and size

each allocation vs the best: paired difference, 95 % CI

families: instance as unit
