1 Landscapes & runs

REF, 1 inst.
120 runs

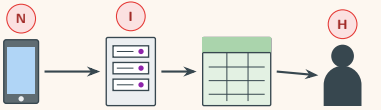

SVC, 30 inst.
4 runs each

RUG, 20 inst.
4 runs each

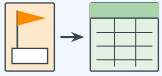

per cell of 6 bias conditions $\times$ 7 levels

2 Where bias enters

N novelty: first test of every new variant $+b$
I instrumentation: every test of TELEM variants $+b$; also with an audit of 10 tests
H favourite: every re-test of the favourite $+b$
$b/\sigma \in \{0, .25, .5, 1, 1.5, 2, 3\}$

3 Programme

evidence ledger, 400 tests

tests of 2,000 sessions; H also at 500 and 8,000

4 Measured

change in shipped utility against $b = 0$ with the same seeds, points of U^*

5 Analysis

Paired difference per level, 95 % CI

mean over the three classes

bias in units of $\sigma(n)$ and of utility
