1 Scenarios

120 scenarios drawn at random

or

family, then a random instance of it

2 Drawn factors

capabilities	10, 12 or 14
test size n	400–8,000 sessions
budget	100, 200, 400 or 800 tests
validity ρ	0.2–0.8
ideas per round V	2–15
reach of an idea	1, 2 or 3 capabilities

1,024 to 16,384 configurations; test size log-uniform

signal-to-noise: s.d. of the 50 best utilities / $\sigma(n)$, from 0.07 to 2.1

3 Programme

- Champion–challenger
- Launch-and-learn
- Design-thinking loop
- Evidence ledger

$\times$ 12 runs with common seeds per scenario

5,760 runs

4 Measured

ledger's advantage over each policy, points of U^*

share of scenarios won

5 Analysis

Regression of the advantage on standardised factors

HC3 robust 95 % intervals

scenario as unit
