Managing evidence, not ideas

Experimentation information systems for digital services in the age of generative AI

+8.5 to +14.7 points
of the optimum vs champion–challenger A/B testing, equal traffic

Screening > volume
20 unscreened ideas = 1 idea; validity explains 3–6× more variance

Bias: audit, don't re-test
instrumentation bias survives re-testing; an audit removes it

Validated queueing testbed · 51 service instances · >50,000 simulated improvement projects
