Managing evidence, not ideas

Experimentation information systems for digital services in the age of generative AI

+8 to +18 points
of the optimum vs champion–challenger A/B testing, equal traffic

Screen, don't just generate
volume without a valid screen adds nothing; homogenised ideas cost 5–7 points

Bias: audit, don't re-test
instrumentation bias survives re-testing; an audit removes it

Validated queueing testbed · 51 service instances · >50,000 simulated improvement projects
