(a) E5 – generative-AI ideation

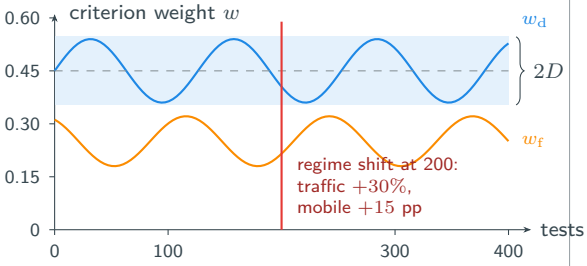

Factors: $\rho \in \{0, .25, .5, .75, .9\}$, $V \in \{1, 5, 20\}$, $h \in \{0, .5, .9\}$ (45 cells).

(b) E6 – where measurement bias enters

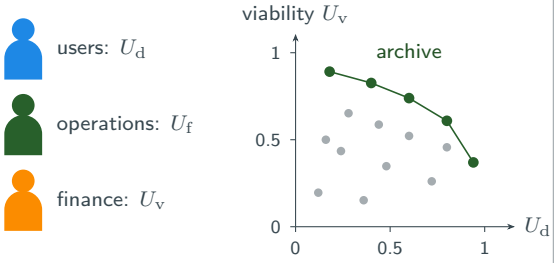

N novelty: first test of a new variant $+b$
I instrumentation: every test of TELEM variants $+b$
H favourite (HiPPO): re-tests of the favourite $+b$
$b/\sigma \in \{0, .25, .5, 1, 1.5, 2, 3\}$;
H also at $n \in \{500, 2000, 8000\}$ sessions

(c) E7 – drifting criteria and a regime shift

Amplitude $\in \{0, .05, .1, .2\}$; forgetting $\gamma \in \{1, .98, .95, .9\}$

(d) E8 – several stakeholders

x: desirability U_d. Archive vs scalarised loops; budget $\in \{200, 400, 800\}$ tests
